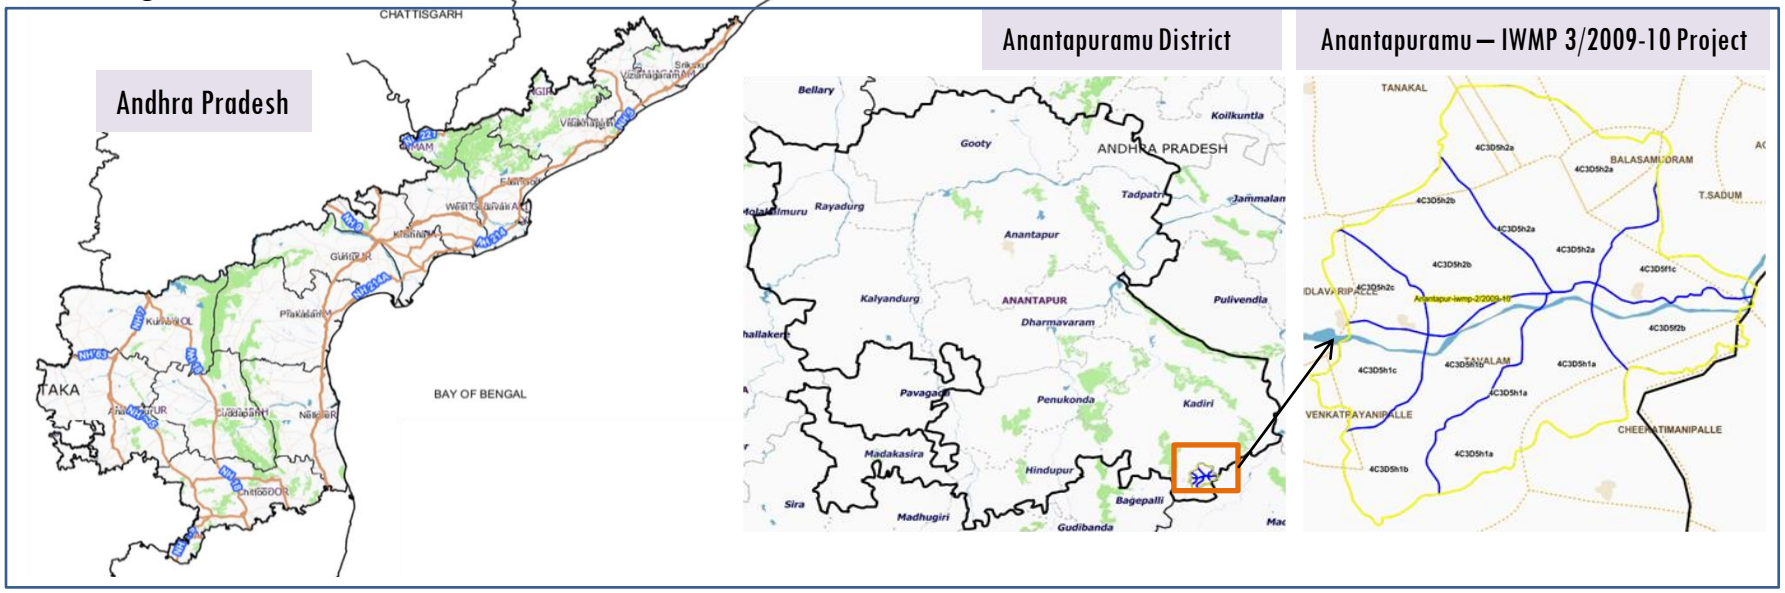
CONTENTS

EXECUTIVE SUMMARY

- Integrated Watersheds Management Project (IWMP) is a flagship programme of Department of Land Resources (DoLR), Ministry of Rural Development (MRD).
- National Remote Sensing Centre (NRSC), ISRO has designed and developed Bhuvan Geo-ICT Web portal tools namely – Srishti and Drishti for monitoring and evaluation of IWMP watersheds. It uses high spatial and temporal resolution sensors viz., Carto-1/2(2.5 m) , LISS-IV(5.8 m color).
- Current summary report gives details of Project - IWMP-03/2009-10, Anantapuram District of Andhra Pradesh. The total geographical area of the project is 4,846.17 ha. It comprises of 04 micro watersheds.
- In the project area only 1 Drishti photos were uploaded showing as a Dugout pit/Farm ponds.
- Project area as per image analysis has witnessed distinguishable increase in farm ponds, showing 1 new farm pond or dug out pond with 14.32 ha increase in the area.
- Major percentage i.e. 34.74% is covered by the agriculture, 32.61% is covered by scrub land , 26.85% by Forest and remaining by other land use classes.

PROJECT : ANANTAPURAM - IWMP-03/2009-10
DISTRICT : Anantapuramu , STATE : ANDHRA PRADESH

- The study area falls in Kanaganapalle Mandal of Anantapuramu district of Andhra Pradesh state. The total geographical area of the project is 4,846.17 ha. It comprises of 04 micro watersheds. Location Map of the study area is shown in Figure below. Analysis is done for 2009-10 (T0) period (***Batch -1***) projects taking 2017-18 (T5) period satellite images.



- Anantapuram has a semi-arid climate, with hot and dry conditions for most of the year. Summers start in late February and peak in May with average high temperatures around the 37 °C range and it reaches around 44 °C to 45 °C .
- Anantapuram gets pre-monsoon showers starting as early as March, mainly through north-easterly winds blowing in from Kerala. Monsoon arrives in September and lasts until early November with about 250 mm (9.8 in) of precipitation. A dry and mild winter starts in late November and lasts until early February; with little humidity and average temperatures in the 22–23 °C (72–73 °F) range. Total annual rainfall is about 22 in (560 mm).
- Anantapuram district receives moderate to good rainfall from July to October month.

MONITORING IN THE PROJECT AREA

Site Wise Changes in the Project

- Impacts of the activities carried out are presented through combination of Drishti and Srishti captures
- T0 is the baseline period before implementation (2009-10) and T5 is 2017-18 period for monitoring
- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.

MONITORING IN THE PROJECT AREA

Land use and Land cover Changes in the Project

- Change in land use and land cover form T0 to T5 are analyzed in terms of built up, mining/dump, agriculture , plantation- horticulture, forest, barren rocky waterbody-streams/river/reservoir and waterbody –ponds.
- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.
- The result obtained for the period T0 to T5 are given in the change matrix table.
- In matrix table column represents the T0 (2009-10) and row represents the T5 (2017-18)

• In matrix table diagonal elements represent the both periods in the same class and off diagonal elements represents change in between the classes.

• In T0 61.98 ha of the agriculture area has decreased and it is converted into built up, plantation and scrub in T1.

• In T1 87.94 ha of the agriculture area has been increased from plantation, forest and scrubland of T0. The additional agriculture are coming from waterbody in T1 represents seasonal agriculture.

Table showing change matrix depicting Land cover transitions during study period- 2013-14 to 2014-15

Land cover	Monitoring period (T2)										Units in Hectares

Waterbody – Ponds			0.27							109.62	109.89
Grand Total	**58.66**	**67.62**	**2145.36**	**12.84**	**1275.53**		**51.28**	**1119.14**	**3.24**	**112.53**	**4846.17**

- In matrix table diagonal elements represent the both periods in the same class and off diagonal elements represents change in between the classes.
- In T4 4.72 ha of the agriculture area has decreased and it is converted into built up, mining/dump, scrubland and water body in T5.
- In T5 15.15 ha of the agriculture area has been increased from plantation, forest and scrubland of T4. The additional agriculture are coming from waterbody in T5 represents seasonal agriculture.

Conclusion

1. DPR of the project is uploaded on to Bhuvan Portal.
2. The LULC shows that there is an increase in Crop land, Built up area, Reservoir / Tanks & decrease in Scrubland as presented in the change matrix for different years.
3. There is an increase of 28.96 Hectares in Reservoir / Tanks area as compared between baseline LU/LC data 2009-10 (T0) & 2017-18 (T5) years.
4. There is an increase of 25.96, 227.42, 154.56, 67.28 & 10.42 Hectares From T0-T1, T1-T2, T2-T3, T3-T4 & T4-T5 respectively and overall increase of 485.64 Hectares in Crop land area as compared between baseline LU/LC data 2009-10 (T0) & 2017-18 (T5) years.
5. There is a decrease of 562.76 Hectares in Scrubland area as compared between 2009-10 (T0) & 2017-18 (T5) years.
6. Farm ponds (5) is visible on IWMP Bhuvan Srishti portal out of Bhuvan Drishti photo of Farm ponds (5) verified from the portal.
