EXECUTIVE SUMMARY

- Integrated Watersheds Management Project (IWMP) is a flagship programme of Department of Land Resources (DoLR), Ministry of Rural Development (MRD).

- National Remote Sensing Centre (NRSC), ISRO has designed and developed Bhuvan Geo-ICT Web portal tools namely – Srishti and Drishti for monitoring and evaluation of IWMP watersheds. It uses high spatial and temporal resolution sensors viz., Carto-1/2(2.5 m) , LISS-IV(5.8 m color).

- Current summary report gives details of Project - IWMP-52/2011-12, Anantapuramu District of   Andhra Pradesh.   The total geographical area of the project is 4,507 ha.   It comprises of 4 micro watersheds.

- In the project area 276 Drishti photos were uploaded showing check dams/Rock fill dam, livelihood activities, and remaining showing other activities.

- Water bodies have shown an increased by 7.7 ha , which correspond to the other land use classes that have been converted into various water bodies in this period.

- Major percentage i.e. 80 % is covered by the agriculture, 11 % is covered by Scrub land, 4 % is covered by water body and remaining by other land use classes.

PROJECT : ANANTAPURAMU - IWMP-52/2011-12
DISTRICT : ANANTAPURAMU , STATE : ANDHRA PRADESH

- The study area falls in Roddam Mandal of Anantapuramu district of Andhra Pradesh state. The total geographical area of the project is 4,507 ha. It comprises of 4 micro watersheds. Location Map of the study area is shown in Figure below. Analysis is done for 2011-12 (T0) period (*Batch -1*) projects taking 2019-20 (T5) period satellite images
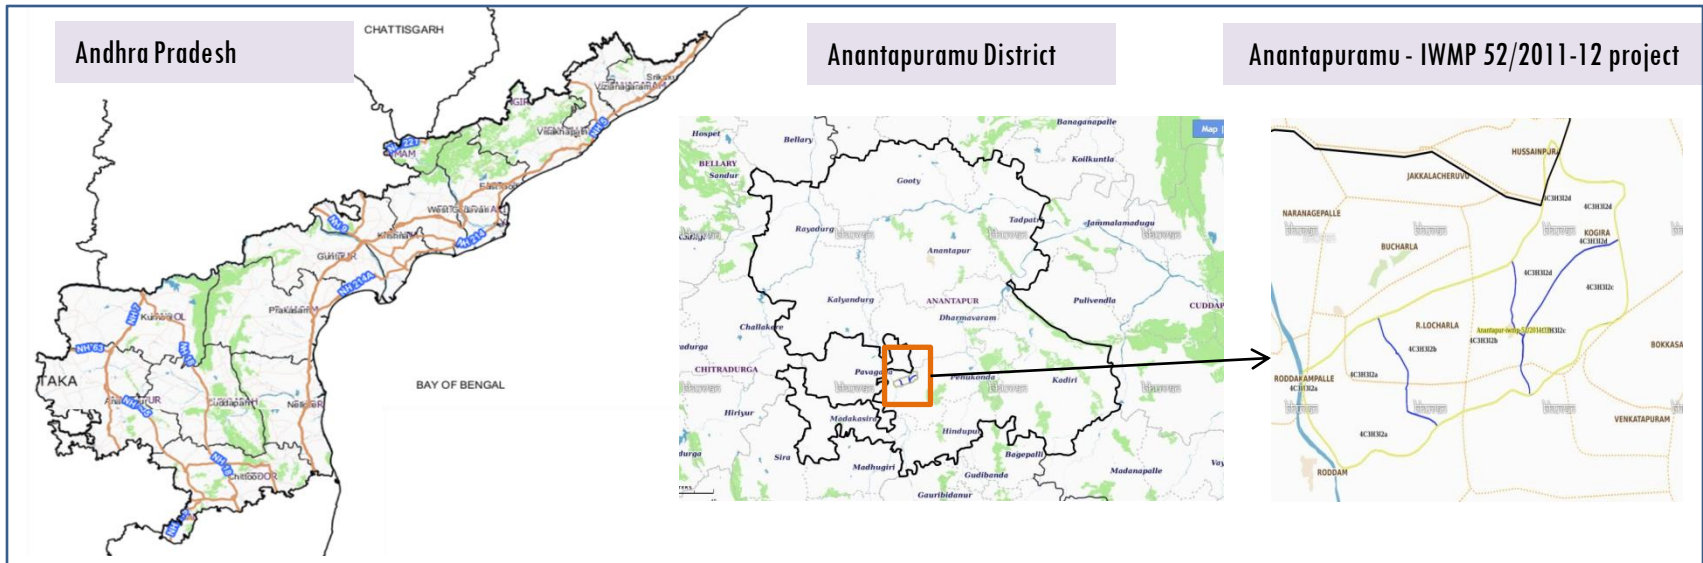

- Anantapuram has a semi-arid climate, with hot and dry conditions for most of the year. Summers start in late February and peak in May with average high temperatures around the 37 °C range and it reaches around 44 °C to 45 °C .

- Anantapuram gets pre-monsoon showers starting as early as March, mainly through north-easterly winds blowing in from Kerala. Monsoon arrives in September and lasts until early November with about 250 mm (9.8 in) of precipitation. A dry and mild winter starts in late November and lasts until early February; with little humidity and average temperatures in the 22–23 °C (72–73 °F) range. Total annual rainfall is about 22 in (560 mm).

- Anantapuram district receives moderate to good rainfall from July to October month.

# MONITORING IN THE PROJECT AREA

Site Wise Changes in the Project

- Impacts of the activities carried out are presented through combination of Drishti and Srishti captures.

- T0 is the baseline period before implementation (2011-12) and T5 is 2019-20 period for monitoring.

- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.

MONITORING IN THE PROJECT AREA

Land use and Land cover Changes in the Project

- Change in land use and land cover form T0 to T5 are analyzed in terms of built up, mining/dump, agriculture, plantation- horticulture, forest, barren rocky waterbody-streams/river/reservoir and waterbody –ponds.

- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.

- The result obtained for the period T0 to T5 are given in the change matrix table.

- In matrix table column represents the T0 (2011-12) and row represents the T5 (2019-20)

Waterbody – Ponds			2.59							199.98	202.57
Grand Total	81.03		3246.52	65.89				907.83	3.67	202.99	4507.95

- In matrix table diagonal elements represent the both periods in the same class and off diagonal elements represents change in between the classes.

- In T0 13 ha of the agriculture area has decreased and it is converted into Built-up and water body in T1.

- In T1 74 ha of the agriculture area has increased from plantations, scrubland and water body of T0.

- The additional agriculture are coming from waterbody in T1 represents seasonal agriculture.

Table showing change matrix depicting Land cover transitions during study period-2015-16 to 2016-17

Land cover	Monitoring period (T2)										Units in Hectares
T1	Built up	Mining/dump	Agriculture	Plantation Horticulture	Forest	Forest Plantation	Barren Rocky	Scrub	Waterbody-Streams/River	Water body Ponds	Grand Total

Grand Total	93.29	10.49	3605.46	61.39				523.36	3.67	210.28	4507.95

• In matrix table diagonal elements represent the both periods in the same class and off diagonal elements represents change in between the classes.

• In T4 17 ha of the agriculture area has decreased and it is converted into Built-up, mining/dump, plantations and water body in T5.

• In T5 111 ha of the agriculture area has increased from plantations and scrubland of T4.

• The additional agriculture are coming from waterbody in T5 represents seasonal agriculture.

Conclusion

1. DPR of the project is uploaded on to Bhuvan Portal.

2. The LULC shows that there is an increase in Crop land, Built up area, Reservoir / Tanks & decrease in Scrubland as presented in the change matrix for different years.

3. There is an increase of 7.7 Hectares in Reservoir / Tanks area as compared between baseline LU/LC data 2011-12 (T0) & 2019-20 (T5) years.

4. There is an increase of 63, 24, 09, 230 & 94 Hectares From T1 to T2, T2-T3, T3 to T4 & T4-T5 respectively and overall increase of 422 Hectares in Crop land area as compared between baseline LU/LC data 2011-12 (T0) & 2019-20 (T5) years.

5. There is an increase of 23 ha of the Plantation/Horticulture area has been increased between 2011-12 (T0) & 2019-20 (T5) years.

6. There is a decrease of 489 Hectares in Scrubland area as compared between 2011-12 (T0) & 2019-20 (T5) years.

7. Farm ponds (33) is visible on IWMP Bhuvan Srishti portal out of Bhuvan Drishti photo of Farm ponds (33) verified from the portal.
