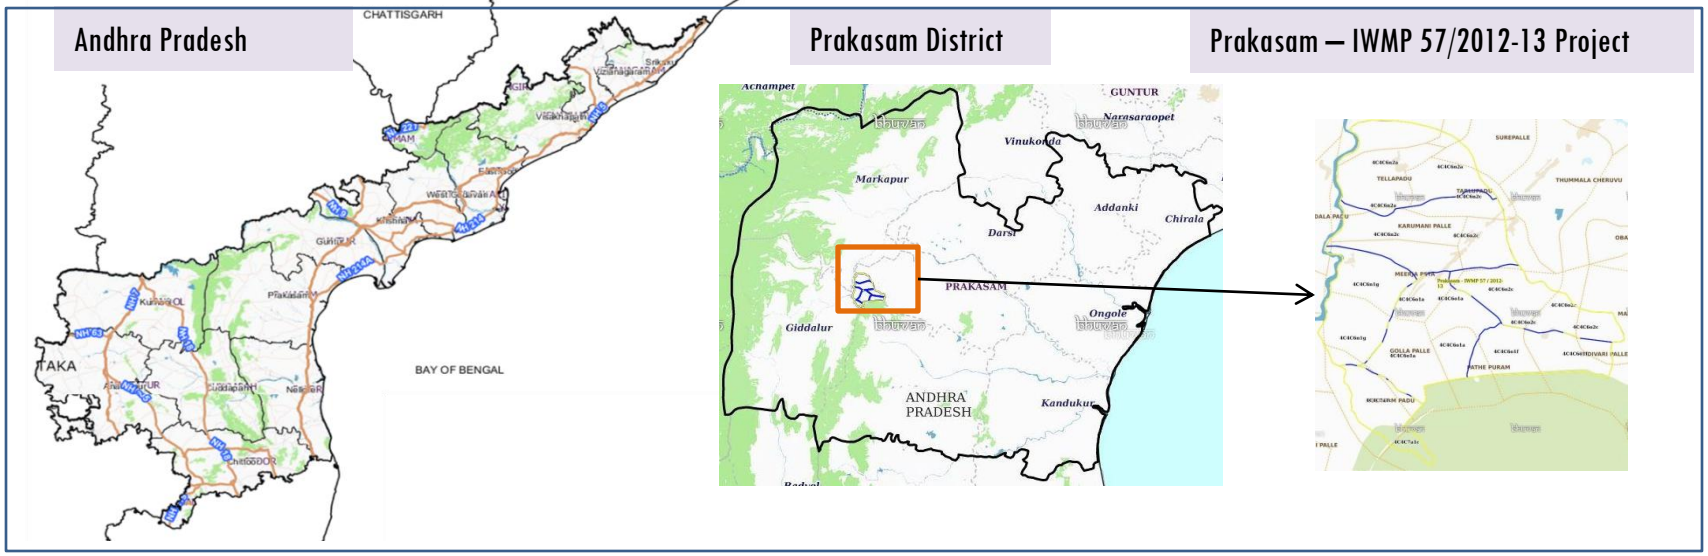
EXECUTIVE SUMMARY

- Integrated Watersheds Management Project (IWMP) is a flagship programme of Department of Land Resources (DoLR), Ministry of Rural Development (MRD).
- National Remote Sensing Centre (NRSC), ISRO has designed and developed Bhuvan Geo-ICT Web portal tools namely – Srishti and Drishti for monitoring and evaluation of IWMP watersheds. It uses high spatial and temporal resolution sensors viz., Carto-1/2(2.5 m) , LISS-IV(5.8 m color).
- Current summary report gives details of Project - IWMP-57/2012-13, Prakasam District of Andhra Pradesh. The total geographical area of the project is **9,185** ha. It comprises of 8 micro watersheds.
- In the project area 130 Drishti photos were uploaded showing 42 check dams/Checks & plugins, 53 Farm ponds/Percolation tanks, 8 livelihood activities, 6 Afforestation, and 21 others.
- Water bodies have shown an increase by 30 ha , which correspond to the other land use classes that have been converted into various water bodies in this period.
- Major percentage i.e. 60 % is covered by the agriculture, 29 % is covered by scrub land, 4.1 % by water body and remaining by other land use classes.

PROJECT : PRAKASAM - IWMP-57/2012-13
DISTRICT : PRAKASAM , STATE : ANDHRA PRADESH

- The study area falls in Tarlupadu Mandal of Prakasam district of Andhra Pradesh state. The total geographical area of the project is **9185** ha. It comprises of 8 micro watersheds. Location Map of the study area is shown in Figure below Analysis is done for 2012-13 (T0) period (***Batch -1***) projects taking 2020-21 (T5) period satellite images.



- Project area witnesses tropical wet and dry climate characterized by year round high temperatures. Prakasam has a record of reaching more than 46°C.
- The average annual rainfall of the district is 798.6 mm, monthly rainfall ranges from nil in March to 182.9 mm in October. October is the wettest month of the year. Southwest monsoon contributes significant rainfall in southern part of the district and Northeast monsoon contributes more than 70% of the rainfall.
- December is the coldest month with normal mean maximum temperature of about 27.1°c and mean minimum temperature of 19.2°C. Temperature begins to rise after February. May is the hottest month with mean daily maximum temperature of about 36.1°C and the mean daily minimum temperature of about 27.7°C. During May and early June the maximum temperature rises occasionally to 46°C and with the onset of SW monsoon by about second week of June, temperature begins to drop rapidly.

MONITORING IN THE PROJECT AREA

Site Wise Changes in the Project

- Impacts of the activities carried out are presented through combination of Drishti and Srishti captures
- T0 is the baseline period before implementation (2012-13) and T5 is 2020-21 period for monitoring
- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.
