- Integrated Watersheds Management Project (IWMP) is a flagship programme of Department of Land Resources (DoLR), Ministry of Rural Development (MRD).

- National Remote Sensing Centre (NRSC), ISRO has designed and developed Bhuvan Geo-ICT Web portal tools namely – Srishti and Drishti for monitoring and evaluation of IWMP watersheds. It uses high spatial and temporal resolution sensors viz., Carto-1/2(2.5 m) , LISS-IV(5.8 m color).

- Current summary report gives details of Project – IWMP-14/2012-13, Srikakulam District of   Andhra Pradesh.   The total geographical area of the project is 12,144 ha. It comprises of 26 micro watersheds.

- In the project area 269 Drishti photos were uploaded showing agriculture/horticulture, afforestation, check dams/checks & plugins, Drainage treatments of Nala Revetment, loose boulder structures etc, and remaining showing other activities.

- Project area as per image analysis has witnessed distinguishable increase in farm ponds, showing 1 new farm ponds or dug out pits and 39 check dams and drainage treatments.

- Water bodies have shown an increase by 119 ha , which correspond to the various water bodies that have been converted into other land use classes in this period.

- Major percentage i.e. 45 % is covered by the agriculture, 24 % is covered by forest , 17 % is covered by scrubland, 5.5 % by plantation and remaining by other land use classes.

- The study area falls in Meliaputti Mandal of Srikakulam district of Andhra Pradesh state. The total geographical area of the project is 12,144 ha. It comprises of 26 micro watersheds. Location Map of the study area is shown in Figure below. Analysis is done for 2012-13 (T0) period (*Batch -1*) projects taking 2020-21 (T5) period satellite images
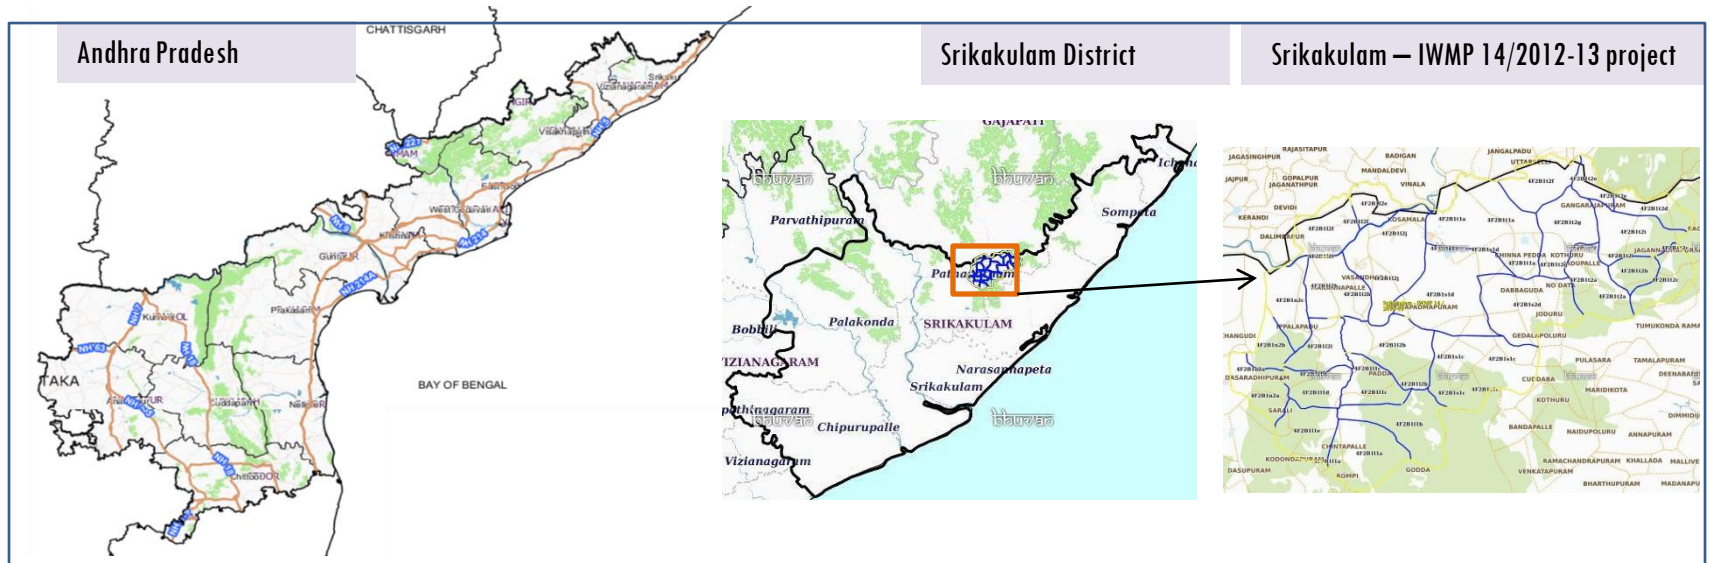

- The climate of the region is generally tropical, the mean maximum temperature is 30-40°C April-May and the mean minimum temperature is 17.4°C December-January during the summer season till the onset of the South-West monsoon the heat is oppressive and the day temperature is May sometimes go about 43°C.

- The rainfall in the region is considerably more in the hilly areas as compared to the plains, the annual normal rainfall is 1131 mm (i.e., 61% from South West monsoon and 2.2% from Northeast monsoon) is shared by summer showers and winter rains.

MONITORING IN THE PROJECT AREA

Site Wise Changes in the Project

- Impacts of the activities carried out are presented through combination of Drishti and Srishti captures.

- T0 is the baseline period before implementation (2012-13) and T5 is 2020-21 period for monitoring.

- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.

MONITORING IN THE PROJECT AREA

Land use and Land cover Changes in the Project

- Change in land use and land cover form T0 to T5 are analyzed in terms of built up, mining/dump, agriculture, plantation- horticulture, forest, barren rocky waterbody-streams/river/reservoir and waterbody –ponds.

- Captures are also provided wherever changes are observed in satellite images, that may match expected activity related impact, even though they don't have Drishti report yet.

- The result obtained for the period T0 to T5 are given in the change matrix table.

- In matrix table column represents the T0 (2012-13) and row represents the T5 (2020-21)

Waterbody – Ponds										375.31	**375.31**
Grand Total	**225.63**	**102.55**	**5504.81**	**612.95**	**2917.23**	**152.79**	**12.6**	**2134.08**	**101.92**	**378.68**	**12,143.24**

• In matrix table diagonal elements represent the both periods in the same class and off diagonal elements represents change in between the classes.

•In T4 23 ha of the agriculture area has decreased and it is converted into Built-up, mining/dump, plantations, scrub and water body in T5.

•In T5 145 ha of the agriculture area has increased from plantations, forest, forest plantation, scrubland and water body of T4.

• The additional agriculture are coming from waterbody in T5 represents seasonal agriculture.

Conclusion

1. DPR of the project is uploaded on to Bhuvan Portal.

2. The LULC shows that there is an increase in Crop land, Built up area, Reservoir / Tanks & decrease in Scrubland as presented in the change matrix for different years.

3. There is an increase of 119 Hectares in Reservoir / Tanks area as compared between baseline LU/LC data 2012-13 (T0) & 2020-21 (T5) years.

4. There is an increase of 91, 192, 179 & 121 Hectares from T0 to T1, T1 to T2, T3-T4 & T4-T5 respectively and overall increase of 585 Hectares in Crop land area as compared between baseline LU/LC data 2012-13 (T0) & 2020-21 (T5) years

5. There is a **increase of 343 Hectares in plantation area** as compared between 2012-13 (T0) & 2020-21 (T5) years.

6. There is a decrease of 805 Hectares in Scrubland area as compared between 2012-13 (T0) & 2020-21 (T5) years

7. Farm ponds (13) is visible on IWMP Bhuvan Srishti portal out of Bhuvan Drishti photo of Farm ponds (13) verified from the portal.
